

COVID-19

WE ARE OPEN

(866) 482-2007

MON-FRI: 7AM-4:30PM

Our Safety Protocols:

In Your Home

- All technicians take their temperature before coming to work. Anyone with a fever (100°F or higher) is not permitted to come to work.
- All technicians will wear a mask while inside of your home. If you are immunocompromised, please let us know so the technician can be outfitted with an N95 mask, rubber gloves, shoe covers, and a Tyvek suit.
- Technicians are not to shake hands with customers, and we highly recommend a social distance of at least 3 feet at all times. We also recommend leaving the room while the technician is working to minimize contact.
- Customers are not to touch technicians' tools or equipment, and all tools are sprayed with 99% alcohol between job sites.

At the Shop

- All communal surfaces - such as door handles, phones, computer mouses and keyboards, copiers, and kitchen items - are wiped down regularly with Clorox wipes.
- All personnel are following the CDC's guidelines for social distancing, and there is no person-to-person contact.
- 3rd party deliveries are no-contact. The delivery person is solely responsible for unloading all materials and equipment, and all items are sprayed with 99% alcohol before our personnel comes into contact with them.
- All doors remain locked to the public, and no visitors are allowed inside of the shop.

We are taking this very seriously. This too shall pass, and your comfort and health are our top priorities.
